Game Development

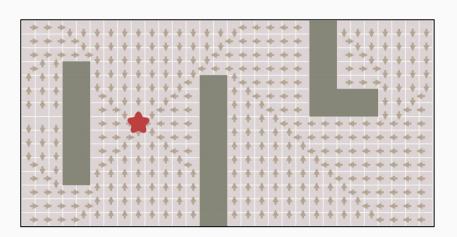

BFS to Dijkstra

Solution BFS

Creating a path out of BFS

- BFS only navigates the whole map
- It's actually calculating the path to all other nodes
- Let's keep on "the node I come from"
- It should give us a map like

BFS in action

А	В	С
D	F	G
Н	I	START

We add new array parallel to visited to record were every tile comes from called "breadcrumbs"

Frontier	Visited	Breadcrumbs

А	В	С
D	F	G
Н	I	START Step 0

Add START to both frontier and visited. Adding START to breadcrumbs is optional.

Frontier	Visited	Breadcrumbs
START	START	START

А	В	С
D	F	G Step 1
Н	l Step 1	START Step 0

POP START and add all neighbours to frontier and visited

Frontier	Visited	Breadcrumbs
G	START	START
I	G	START
	1	START

A	В	C Step 2
D	F Step 2	G Step 1
Н	l Step 1	START Step 0

POP G and add all **not-visited** neighbours to frontier and visited

Frontier	Visited	Breadcrumbs
I	START	START
С	G	START
F	Ι	START
	С	G
	F	G

А	В	C Step 2
D	F Step 2	G Step 1
H Step 3	l Step 1	START Step 0

POP I and add all **not-visited** neighbours to frontier and visited

Frontier	Visited	Breadcrumbs
С	START	START
F	G	START
Н	1	START
	С	G
	F	G
	Н	I

А	B Step 4	C Step 2
D	F Step 2	G Step 1
H Step 3	l Step 1	START Step 0

POP C and add all **not-visited** neighbours to frontier and visited

Frontier	Visited	Breadcrumbs
F	START	START
Н	G	START
В	1	START
	С	G
	F	G
	Н	I
	В	С

А	B Step 4	C Step 2
D	F	G
Step 5	Step 2	Step 1
H	l	START
Step 3	Step 1	Step 0

POP F and add all **not-visited** neighbours to frontier and visited

Frontier	Visited	Breadcrumbs
Н	START	START
В	G	START
D	_	START
	С	G
	F	G
	Н	I
	В	С
	D	F

А	B Step 4	C Step 2
D	F	G
Step 5	Step 2	Step 1
H	l	START
Step 3	Step 1	Step 0

POP H and add all **not-visited** neighbours to frontier and visited (there is none!)

Frontier	Visited	Breadcrumbs
В	START	START
D	G	START
	I	START
	С	G
	F	G
	Н	I
	В	С
	D	F

A	B	C
Step 7	Step 4	Step 2
D	F	G
Step 5	Step 2	Step 1
H	l	START
Step 3	Step 1	Step 0

POP B and add all **not-visited** neighbours to frontier and visited

Frontier	Visited	Breadcrumbs
D	START	START
А	G	START
	I	START
	С	G
	F	G
	Н	I
	В	С
	D	F
	А	В

A	B	C
Step 7	Step 4	Step 2
D	F	G
Step 5	Step 2	Step 1
H	l	START
Step 3	Step 1	Step 0

POP D and add all **not-visited** neighbours to frontier and visited (there is none!)

Frontier	Visited	Breadcrumbs
А	START	START
	G	START
	I	START
	С	G
	F	G
	Н	I
	В	С
	D	F
	А	В

A	B	C
Step 7	Step 4	Step 2
D	F	G
Step 5	Step 2	Step 1
H	l	START
Step 3	Step 1	Step 0

POP A and add all **not-visited** neighbours to frontier and visited (there is none!)

Frontier	Visited	Breadcrumbs
	START	START
	G	START
	I	START
	С	G
	F	G
	Н	Ι
	В	С
	D	F
	А	В

A	B	C
Step 7	Step 4	Step 2
D	F	G
Step 5	Step 2	Step 1
H	l	START
Step 3	Step 1	Step 0

We finish since frontier is empty

Frontier	Visited	Breadcrumbs
	START	START
	G	START
	1	START
	С	G
	F	G
	Н	1
	В	С
	D	F
	А	В

A	B	C
Step 7	Step 4	Step 2
D	F	G
Step 5	Step 2	Step 1
H	l	START
Step 3	Step 1	Step 0

We reconstruct the path backwards. We arrived to A from B

Frontier	Visited	Breadcrumbs
	START	START
	G	START
	I	START
	С	G
	F	G
	Н	I
	В	С
	D	F
	Α	В

A	B	C
Step 7	Step 4	Step 2
D	F	G
Step 5	Step 2	Step 1
H	l	START
Step 3	Step 1	Step 0

We arrived from B from C

Frontier	Visited	Breadcrumbs
	START	START
	G	START
	1	START
	С	G
	F	G
	Н	I
	В	С
	D	F
	А	В

A	B	C
Step 7	Step 4	Step 2
D	F	G
Step 5	Step 2	Step 1
H	l	START
Step 3	Step 1	Step 0

We arrived from C from G

Frontier	Visited	Breadcrumbs
	START	START
	G	START
	I	START
	С	G
	F	G
	Н	I
	В	С
	D	F
	А	В

A	B	C
Step 7	Step 4	Step 2
D	F	G
Step 5	Step 2	Step 1
H	l	START
Step 3	Step 1	Step 0

We arrived from G from START

Frontier	Visited	Breadcrumbs
	START	START
	G	START
	I	START
	С	G
	F	G
	Н	I
	В	С
	D	F
	А	В

A	B	C
Step 7	Step 4	Step 2
D	F	G
Step 5	Step 2	Step 1
H	l	START
Step 3	Step 1	Step 0

Our final path is: START > G > C > B > A

Frontier	Visited	Breadcrumbs
	START	START
	G	START
	Ι	START
	С	G
	F	G
	Н	I
	В	С
	D	F
	А	В

TODO 1

"Record the direction to the previous node with the new list "breadcrumps"

- The list breadcrumps is already created
- Note the change of name of few functions
- For each neighbor, remember that you come from "current" cell
- Just one line of code somewhere in the method

Reconstructing the path

```
current = goal
path = [current]
while current != start:
   current = breadcrumbs[current]
   path.append(current)
path.append(start)
```

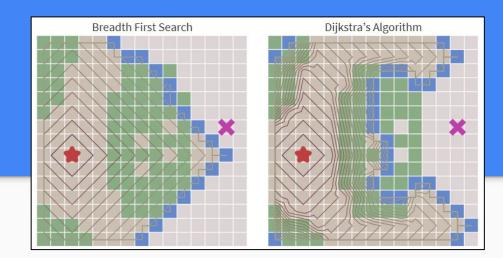

TODO 2

"Follow the breadcrumps to goal back to the origin add each step into "path" dyn array (it will then draw automatically)"

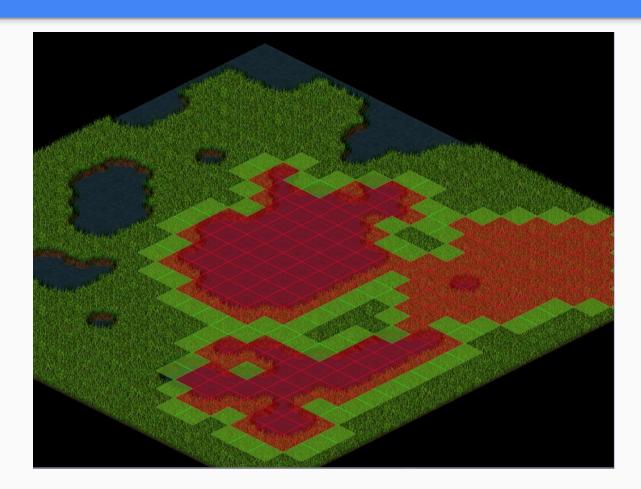

- The dyn array for path already exists
- If filled, it will draw "X" on each tile
- The mouse position when clicked is already calculated for you

Dijkstra

- Expands in all directions like BFS
- But will prefer low cost nodes
- We will simulate that water has a lower cost
- Check solution.exe keys j & k
- We could re-visit a node more than once
- We need to write down in each cell the latest accumulated score

Solution Dijkstra (press J/K to expand)

Dijkstra

```
frontier = PriorityQueue()
frontier.put(start, 0)
came from = {}
cost so far = {}
came from[start] = None
cost so far[start] = 0
while not frontier.empty():
  current = frontier.get()
  for next in graph.neighbors(current):
     new_cost = cost_so_far[current] + graph.cost(current, next)
     if next not in cost_so_far or new_cost < cost_so_far[next]:</pre>
       cost so far[next] = new cost
       frontier.put(next, new cost)
       came from[next] = current
```

TODO 3

"Taking BFS as a reference, implement the Dijkstra algorithm use the 2 dimensional array "cost_so_far" to track the accumulated costs on each cell (is already reset to 0 automatically)"

- Frontier is already a priority queue
- Be sure to understand MovementCost() method
- Cost_so_far is just a big fat array, just ok for now :)

Homework

- Try stopping when you reach certain node
- Experiment with an orthographic map with different tile weights

Really good article about the three basic navigation methods here
